

## **Clamp Forklift Part**

Part for Clamp Forklift - Normally used as forklift attachments in petroleum and chemical industries, the Drum Clamp, are specifically intended for the secure handling of standard 55-gallon drums. These additional parts greatly enhance productivity in view of the fact that they can handle up to 4 drums per load.

Drum Clamps can likewise be utilized in the food packaging and processing business or where there is a requirement to store or handle drums. This type of clamp enables the person operating it to grab the drums in a safe way for transport and could greatly increase operator productivity. When attempting to handle drums using traditional lift truck blades, much instability happens while cornering and braking. This common drawback can really be dealt with securely and proficiently by making use of the Drum Clamp attachment instead.
