

Utility Buckets

Utility Bucket - "Slip on the forks" accessory buckets or also known as Universal Fit buckets can be used with any model or design of extendable reach lift truck. If your unit is unable to be matched with a quick-tach unit, another brand new or used universal fit bucket can be located in its place. Typical universal lift truck buckets attach to blades which are up to 6" wide and are 48" long. Larger fork pockets could be prearranged via an account executive upon request.

Because they slip directly onto the blades, universal fit buckets stay on the equipment and are much less at risk to destruction. Compared to the quick-tach bucket models, universal fit buckets are 50% deeper. This extra space makes them ideal for lifting irregular shaped loads like broken up concrete, backfilling behind walls, tearing off roof trash, elevating roof gravel and moving large debris piles.

Quick-Tach Buckets

Moreover, made as additions for extendable-reach lift trucks, Quick-Tach buckets, are made to tolerate the positioning of materials way beyond the normal reach of the loader. A hardened beveled cutting blade on both sides and on the leading edge reinforces stability, resistance to wear and offers supreme durability. Quick-Tach forklift buckets are augmented by scuff bars along the base of the unit which shield it from scratches.

Quick-Tach lift truck buckets could be used to replace the carriage and blades which weigh between 100-700lbs. Once set up, these buckets free up more of the unit's load capacity, enabling it to handle heavier and larger supplies. The Quick-Tach is able to pour items more or less 1.5 feet higher thanks to the shorter depth of its bucket. These buckets are designed in a customized fashion to be able to suit all the specs of specific models and makes of lifts. It is important to talk to a construction equipment specialist so as to find the customized Quick-Tach bucket solution for all your requirements.

Lift truck bucket attachments are exceptional for ground level work on construction sites. They are often used for moving snow in northern parts, and gravel and sand loading. Jobsite clean-up is another function the forklift bucket does well. The various purposes the bucket can do saves the company more time and money since it does not have to absolutely switch tools or equipment and this can help avoid running into overtime.
